You've got your sights set on that car, it's the right price, looks good, and a perfect fit but hold on! If you're considering purchasing a used car, you should also think about its safety. It's important that your vehicle allows you good protection from injury in a crash.

The Used Car Safety Ratings chart in the rear of this brochure provides you with the crash safety rating for the damn. It shows how many lives could be saved if you check for death or serious injury in a crash.

It's important to look for features that help prevent crashes, including: electronic stability control (ESC), full-length seat belt pre-tensioners, an electronic airbag deactivation switch, and seat belt reminders. Electronic stability control is a feature that is included in many vehicles and can help prevent rollover accidents.

If you're thinking about purchasing a used car, it's also important to check for the ANCAP ( Accident Prevention Council of Queensland) safety rating. The ANCAP safety rating is a rating system that assesses the safety performance of new cars. The rating is based on how well the car was designed and built to protect occupants in crashes.

The ANCAP safety rating is a valuable tool for evaluating the safety of a new car. It's important to check for the ANCAP safety rating before buying a new car, as it will help you make an informed decision about which car is right for you.

The Used Car Safety Ratings chart in the rear of this brochure will help you find the car that's right for you. It's important to check for the ANCAP safety rating before buying a new car, as it will help you make an informed decision about which car is right for you.
